**Signature (responsible party)** \_\_\_\_\_ **Date**

## Well Site Floodplain Encroachment Procedures (44 CFR 60.3)

Any construction within a designated FEMA floodplain must follow the following procedures:

### Preconstruction

- Need to establish Base Flood Elevation (BFE) for floodplain being encroached upon
- Establish Pad Site Elevation
- Determine and Illustrate Egress and ingress from the County Road / State Highway to the well site on the site plan
- Submit Engineering study / Drawings for review
- No well Pad Construction in Floodway Permitted
- Preparing of any LOMAs or LOMR-Fs as required

### Post Construction

- As Built+survey / site plan to Verify Pad Elevation
- Means of Protection of Well Head if the pad is below **BFE**
- Means of Disconnection of Well Head in Case of Emergency if the pad and or the approach is constructed below the **BFE**
- All electrical connections need to be above the **BFE**
- List of any chemicals stored on site and their classification code
- Strapping mechanisms for on site equipment stored below **BFE**
- All roads that cross through a flood plain will need to be constructed as a permanent structure with the appropriate headwalls, culvert pipes, and flood stage markers
- The appropriate vegetation installed on the pad edges to abate erosion possibilities

Please submit any inquires to this office and direct them to the County Flood Manager @ 817-556-6380\*

\*For information about boring under a flood plain contact the above.
